#### **Extra Information**

\*Density measured on 25mm diameter cord sample. The density of samples of different sizes will be different from that stated here. \*\*Hardness measured on 8mm thick samples. At less than 10mm the measured hardness will increase with density. Shore A values are provided as a guideline for comparison to solid materials and as such as not designed for use in specifications. \*\*\*Compression Stress measured on samples as defined in BSENISO 3386. The compressive stress on samples of different dimensions, especially thickness may vary from that quoted here. For further information about physical properties for other sample sizes, please contact the technical department.
