BISCO® MF-1 55: FDA Compliance

July 28, 2016

Dear valued customer,

MF-1 55 silicone foams (i) are compounded and cured under conditions of good manufacturing practice; and (ii) have been subjected to annual extraction testing in accordance with FDA Regulation 21 CFR 177.2600 paragraphs (e) and (f) and found to meet all extractives limitations; both of which are criteria set forth in 21 CFR 177.2600 as necessary for rubber articles intended for repeated use in those areas specified in the regulation.

The annual extraction testing was performed as a qualification test on one batch of MF-1 gray color material.

It is up to the end user to make the final determination as to whether MF-1 silicone foams are suitable and will meet the requirements of the FDA for the end user's specific application and use in the areas specified in 21 CFR 177.2600. Rogers Corporation makes no warranties, express or implied, including any warranty of merchantability or fitness for a particular purpose, or that the results indicated herein will be achieved by a user for a particular purpose. The user should determine the suitability of Rogers' High Performance Foams for each application.

For more information regarding this material, please contact your local Rogers Corporation Sales Engineer or Dan Kubick (Senior Technical Marketing Engineer) daniel.kubick@rogerscorporation.com or by calling 630.784.6218

Thank you,
