

LASER CUTTING OF SILICONE

Whilst silicone can be cut by laser cutting, we have experienced mixed results from various customers of ours that have used this method.

Some have reported poor edges; therefore, we always suggest you trial a cut before committing to larger orders.

At Silex we generally cut by blade method or waterjet, both of which are accurate and high quality.

If in doubt with laser cutting, we can always offer our cutting services at economical rates.

For and on behalf of Silex LTD
